

Corporate Capabilities

Amivero delivers innovative solutions and emerging technology through a **human-centered and data-driven** approach across a variety of critical healthcare, national security, and law enforcement missions. Amivero's approach, which leverages a unique coupling of experienced personnel, technical innovation, and relevant corporate experience, enables our team to successfully advance an agency's ability to drive data-driven and programmatic decision making across all levels of leadership.

Our management team is comprised of individuals with proven experience implementing high impact projects. Recognizing that our greatest value is our people, Amivero attracts the best and brightest IT professionals through our performance based and employee centric culture. Our greatest investment is in the growth of our staff, so they can focus on solving our customers highest priority challenges.

Core Expertise

Agility at Scale - We embrace Agile as a lifestyle; every client and program deserves iterative delivery and continuous improvement. Leveraging the most relevant technologies & methodologies in software development, CI/CD, cloud deployment, geospatial, automation, and data analytics, Amivero consistently delivers business value while keeping pace with the rapidly evolving landscape. On projects of all sizes and complexities, we focus on the user experience and enable reliable delivery of game changing solutions.

Data Science & Analytics - At the forefront of the emerging and everchanging field of data science, we are dynamically positioned to derive the most value from your data not only because of our collective skills in visualization, analytics, AI, and RPA, but because of the vision and synergy that drives our work product.

Cyber Security - Experienced in everything from architecture to auditing, our security professionals are experts in monitoring, detecting, preventing, and responding to perceived or presented breaches in cyber security— ranging from insider threats to advanced persistent threats.
